

Classwork

Print this sheet at 100 % (the graph grid is true size).

Part A · Flowers and seeds

1 Complete the sentences. [A]

Pollination is the transfer of pollen from the _____ to the _____. In _____ -
pollination the pollen comes from a different plant of the same species. Fertilisation happens when the
pollen _____ fuses with the ovule nucleus, forming a _____.

2 A dandelion seed has a parachute of fine hairs. Explain how this helps the dandelion plant. [M]

.....

.....

.....

3 Give one advantage and one disadvantage of a plant reproducing asexually. Explain each. [E]

.....

.....

.....

.....

Part B · Photosynthesis and respiration

4 Complete the word equation for respiration. [A]

_____ + _____ → _____ + _____ (+ energy)

5 Before a photosynthesis experiment, a student keeps a plant in a dark cupboard for 2 days. A leaf
tested with iodine then stays brown. Explain why she does this first. [M]

.....

.....

.....

6 Palisade cells are near the top of the leaf and are packed with chloroplasts. Explain how this helps
the leaf. [E]

.....

.....

.....

.....

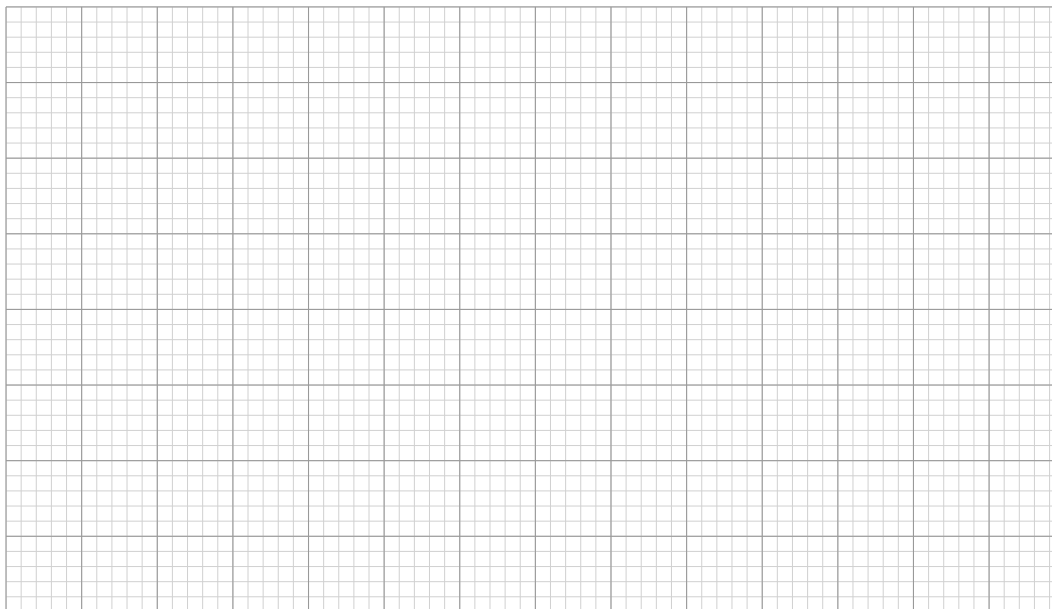

Part C · Transport and osmosis

7 The table shows the height of the liquid in a Visking tubing model.

[M]

Time (min)	0	5	10	15	20	25	30	35
Height (mm)	10	22	34	46	58	70	72	73

(a) Plot the results on the grid. Label both axes with units, choose an even scale, and draw a line.

(b) Describe the pattern in the results.

[M]

.....

.....

(c) Suggest why the liquid stops rising.

[E]

.....

.....

Part D · Properties and density

8 Name the property of metals that each sentence shows.

[A]

(a) Copper can be drawn out into thin wire.

(b) Gold can be beaten into very thin sheets.

(c) A brass bell rings when it is struck.

9 A metal cube has sides of 3.0 cm and a mass of 72.9 g. Calculate its density and use the booklet table (iron 7.9, copper 8.9, silver 10.5, aluminium 2.7 g/cm³) to identify the metal. Show your working. **[M]**

.....

.....

.....

Part E · Alloys and heat treatment

10 Complete: an alloy is a mixture of two or more elements, at least one of which is a **[A]**

11 Steel is iron with a small amount of carbon. Explain why steel is harder than pure iron. Use the idea of layers of atoms. **[E]**

.....

.....

.....

.....

12 Glasses frames made of nitinol can be bent and still go back to their shape. What makes nitinol a smart alloy? **[M]**

.....

.....

Part F · Corrosion and reactions

13 Write the word equations. **[A]**

- (a) calcium + hydrochloric acid →
- (b) sodium + oxygen →

14 Plan an experiment to put magnesium, iron and copper in order of reactivity, using dilute hydrochloric acid. Include your method, how you make it a fair test, what you would observe, your prediction and one safety step. **[E]**
